**Toward the Realization of a Sustainable Society**  
**Decision to install photovoltaic power generation equipment at the Group's 37 sites in Japan**

The Resort Trust Group has decided to install solar power generation systems at all of its 37 locations in Japan, including all of its members-only resort hotels and all of the group's golf courses, in order to reduce greenhouse gas (GHG) emissions over the medium to long term toward the years 2030 and 2050.

The investment is expected to be approximately 2 billion yen, and from fiscal 2022 onward, solar power generation facilities will be installed on the rooftops of buildings and parking lots in accordance with the conditions at each location, with the aim of reducing environmental impact through in-house consumption of the electricity generated. Sanctuary Court BIWAKO is expected to cover approximately 80% of its daytime power consumption with in-house power generation.

Resort hotels and golf courses to be introduced (37 locations)

In promoting our resort business, we recognize that "the beautiful natural environment is the irreplaceable product itself that we offer," and we regard it as one of our social responsibilities to pass on the environment in a beautiful and healthy state to the next generation.

In 2005, we established our Environmental Policy and have been working to reduce our environmental impact through various initiatives, including promotion of energy saving, resource saving, and recycling, prevention of environmental pollution, conservation of water resources, and educational activities on environmental conservation, in order to achieve harmony with the environment and coexistence with society.

In our efforts to combat climate change, in addition to promoting various energy-saving measures, we have been working to utilize renewable energy sources, including the establishment of the Nasu-Shirakawa Mega Solar Power Plant, and we have also taken the opportunity of the Paris Agreement, an international framework adopted in 2015 to reduce greenhouse gas (GHG) emissions, to promote the use of renewable energy sources. The growing global concern about climate change, including the government's October 2020 "carbon neutrality declaration," and the accelerating trend toward decarbonized management by companies.

This policy of installing solar power generation facilities at all resort hotel locations and golf courses is the first step for the Group toward achieving the government's goal of becoming "carbon neutral" by 2050, and we will continue to examine various measures to reduce our environmental impact and to reduce CO2 emissions from the Group's business activities. We will set medium- and long-term goals for reduction and promote initiatives to contribute to the realization of a "sustainable society (sustainability)" through our business.
